AI Health &Wellbeing Advisor

PROJECT REPORT

NAME: Vanshika Sharma

Registration no. : 25BCE10892

1. Introduction

Artificial Intelligence is really helpful in solving problems. In the health field Artificial Intelligence can help people understand information about their health.

This project, AI Health & Wellbeing Advisor is a system that helps users check their basic health status. It includes two features: a BMI and Diet Advisor and a Symptom Checker. The AI Health & Wellbeing Advisor system takes input from the user. Provides simple health suggestions.

2. Objective

The main objective of the AI Health & Wellbeing Advisor project is to create an Artificial Intelligence based program that can help users:

* Calculate their Body Mass Index

* Get basic diet advice

* Check common symptoms

* Receive simple health suggestions

3. Methodology

The AI Health & Wellbeing Advisor project is developed using the Python programming language. The AI Health & Wellbeing Advisor program asks the user to choose between two options:

1. BMI and Diet Advisor

The user enters their weight and height. The AI Health & Wellbeing Advisor system calculates the users Body Mass Index. Tells whether the user is underweight, normal, overweight or obese.

2. Symptom Checker

The user answers questions about symptoms such as fever, cough or headache. Based on the answers the AI Health & Wellbeing Advisor program suggests conditions and advice.

The AI Health & Wellbeing Advisor system works using rule-based logic and simple decision making.

4. Tools Used

The language used for coding the AI Health & Wellbeing Advisor project is Python

The platform, for hosting the AI Health & Wellbeing Advisor program is Github

5. Conclusion

The AI Health & Wellbeing Advisor is a project that shows how Artificial Intelligence can be used in daily life. It helps users check their Body Mass Index. Understand

basic symptoms using simple decision rules. The AI Health & Wellbeing Advisor project demonstrates how Artificial Intelligence techniques can be applied to create tools.
